SUBJECT: Reduction of Service Levels within Program 216 - Roadside and Median Landscape Services

BUDGET SUPPLEMENT REQUEST SUMMARY

On Saturday, February 4, 2006, Council conducted a study session to review the proposed FY 2006/07 Budget restructures. During this session Council requested the Department of Public Works to review and comment on what the effect would be to reduce two program quality measures from the planned targets of 75% to 50%, in Program 216 - Roadside and Median Landscape Services. The quality measures are "Median island plant material areas are free of litter and debris, providing positive visual appeal as determined by quarterly quality surveys" and "Median island plant material areas have no noticeable weeds protruding above landscaped areas as determined by quarterly quality surveys".

The change in these quality measure targets from 75% to 50% would have litter and weeds remaining for a greater period of time. Implementing this change in service level would result in a reduction of 1,334 staff hours and a cost savings of \$36,898 annually for the General Fund. The 20-year impact is a cost savings of \$1,008,556 with inflation.

Staff has no recommendation for this supplement.

BACKGROUND

On Saturday, February 4, 2006, Council conducted a special meeting to review the proposed FY 2006/07 Budget Restructures. During this meeting Council requested the Department of Public Works to review and comment on what the effect would be to reduce two program quality measures from the planned target of 75% to 50%, in Program 216 - Roadside and Median Landscape Services. The quality measures are "Median island plant material areas are free of litter and debris, providing positive visual appeal as determined by quarterly quality surveys" and "Median island plant material areas have no noticeable weeds protruding above landscaped areas as determined by quarterly quality surveys". The current service levels for litter and weed removal along Sunnyvale's boulevard landscaping areas is sixteen (16) times a year or a frequency of approximately once every three (3) weeks. A reduction to the program measure targets from 75% to 50% would result in less frequent litter and weed removal and may also result in a reduction in the customer satisfaction levels for the City's Roadside, Median Landscape services.

quarterly quality surveys.	Plant Material	
•	Maintained	

DISCUSSION

In order to achieve the suggested reduction in service levels for litter and weed removal along Sunnyvale's boulevard landscaping areas, litter and weeding frequencies would need to be reduced from sixteen (16) times a year to eleven (11) times a year or a frequency of once every five (5) weeks. As part of these service level reductions, personnel hours will be reduced by 667 hours in two activities (216440 Weed Removal and Control and 216460 Litter/Debris Control), for a total reduction of 1,334 hours. The 1,334 hour reduction would result in the elimination of one full-time Groundsworker position. This position is currently vacant.

In conjunction with the requested service level reductions, an additional Performance Measure in Program 216 - Roadside and Median Landscape Services will also require reduction. The customer service quality measure states "Customers are satisfied with the condition, appearance and timely response of City Roadsides, Median Landscape services" and the target is 80%. The percentage rating of 80% would need to be lowered to 70%. It is difficult to predict what the actual result of the change will have on the customer service quality measure; we will monitor and adjust in the future as necessary.

To gain a visual understanding of what these reduced service levels would look like, staff has provided several photos as attachments, of landscaped areas that represent the proposed target of 50% level for weeds, litter and debris removal.

PROPOSED REDUCED QUALITY MEASURES

Measure Description	<u>Target</u> <u>Description</u>	<u>Planned</u> <u>Amount</u>
Median island plant material areas are free of litter and debris, providing positive visual	Percent	50%
appeal as determined by quarterly quality surveys.	Sq. Yds. of Plant Material Maintained	2,821,000
Median island plant material areas have no noticeable weeds protruding above	Percent	50%
landscaped areas as determined by quarterly quality surveys.	Sq. Yds. of Plant Material Maintained	2,821,000
Customers are satisfied with the condition, appearance and timely response of City Roadsides, Median Landscape services.	Percent	70%

FISCAL IMPACT

The change in these quality measure targets from 75% to 50% would have litter and weeds remaining for a greater period of time. Implementing this change in service level would result in a reduction in the frequency of litter and weed removal from sixteen (16) times a year to eleven (11) times a year or a frequency of once every five (5) weeks. As part of these service level reductions, personnel hours will be reduced by 667 hours in two activities, for a total reduction of 1,334 hours and a cost savings of \$36,898 annually for the General Fund. The 20-year impact is a cost savings of \$1,008,556 with inflation. The 1,334 hour reduction would result in the elimination of one full-time Groundsworker position.

CONCLUSION

In conclusion, if these two program quality measure targets are reduced from 75% to 50%, Sunnyvale's median landscaped areas would have litter and weeds remaining for a greater period of time.
